

06 Memory Persistent Agents

Agent without memory

"What drink do I prefer?"

User

Agent

Response without
previous context

Agent with memory

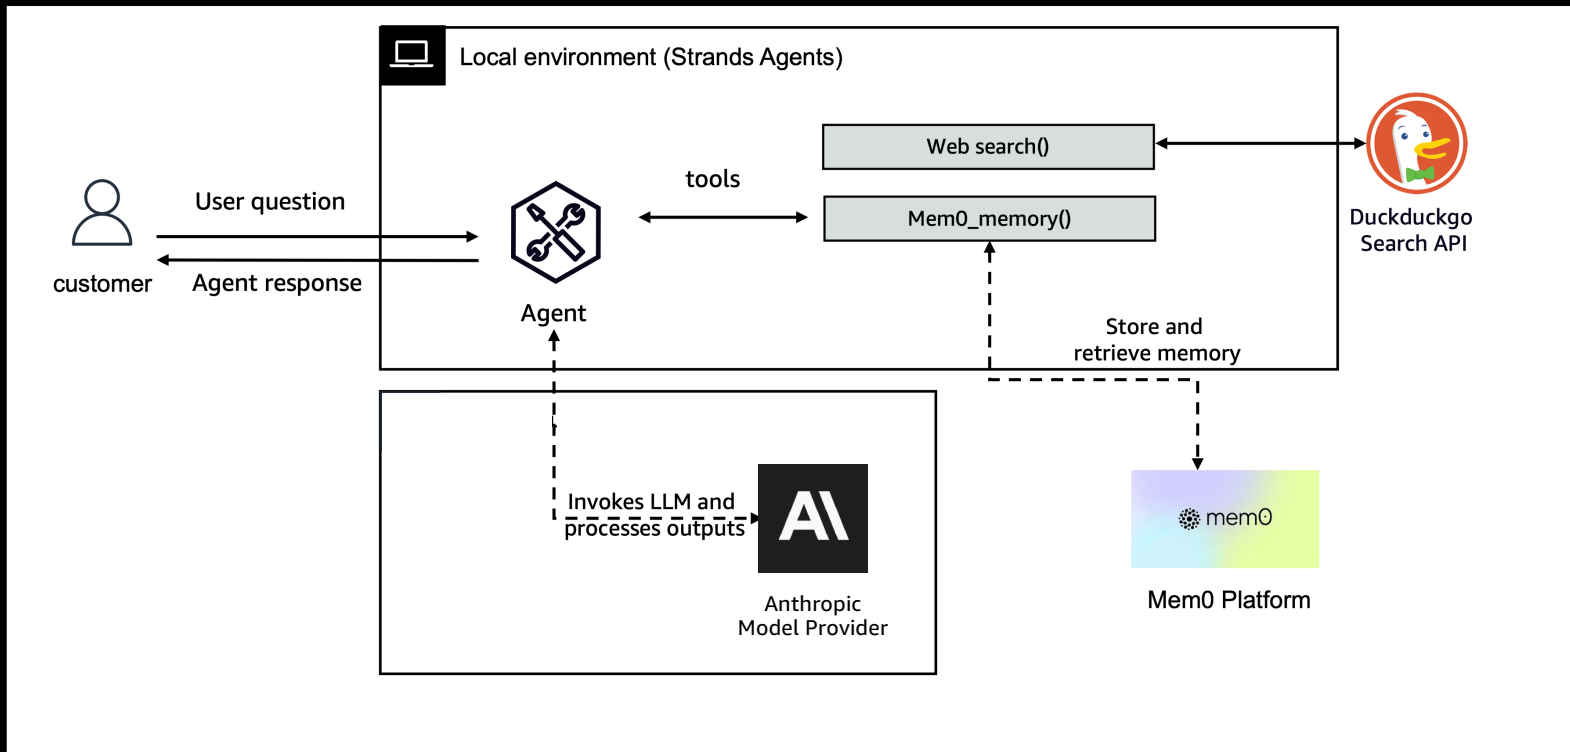

Memory Tools in Strands Agents

- **memory** - Agent memory persistence in Amazon Bedrock Knowledge Bases
- **agent_core_memory** - Integration with Amazon Bedrock Agent Core Memory
- **mem0_memory** - Agent memory and personalization built on top of Mem0
 - *Backend Options:*
 - OpenSearch (AWS_REGION)
 - FAISS (local vector store)
 - Mem0 Platform

Demo

Web Search Memory Agent

Tips for Memory Usage

- Be explicit when asking the agent to remember information
- Use specific queries to retrieve relevant memories
- Memory persistence enables more natural and contextual conversations

Key Takeaways

- Explored the capabilities of a memory-powered Strands agent.
- Learned how to store, retrieve, and list memories.
- Performing web searches via the agent.
- Interacting with the agent in an interactive loop.
